Summary

Backend Engineer with 4+ years of experience building scalable **Spring Boot microservices** and event-driven systems. Expertise in **distributed architectures**, REST APIs, and asynchronous messaging using Kafka. Hands-on experience with **AI systems (RAG, embeddings, Azure OpenAI)** and designing end-to-end backend solutions focused on scalability, reliability, and performance.

Skills

Languages: Java, Python

Backend Development: Spring Boot, Spring Security, REST APIs, Microservices Architecture

Distributed Systems: Event-Driven Architecture, Asynchronous Processing, API Gateway, Service Discovery (Eureka)

Messaging & Streaming: Apache Kafka, Solace PubSub+, Event Queues

Cloud & DevOps: AWS, Docker, Kubernetes (Basics), CI/CD (Jenkins), GitHub Actions

Databases: MySQL, PostgreSQL, MongoDB, Elasticsearch

Core CS: Data Structures, Algorithms, Multithreading, Concurrency, System Design

Tools: IntelliJ, VS Code, Postman, SonarQube, Git, Docker

Experience

Infosys

Feb 2023 – present

Specialist Programmer L2

Pune, MH

- Enhanced a large-scale **monorepo architecture** with 8+ services (frontend and backend), improving maintainability and deployment efficiency.
- Modernized legacy **Spring Boot microservices**, reducing technical debt and improving overall system performance.
- Implemented **Feign Client-based communication** for efficient and secure service-to-service API interactions.
- Built **event-driven pipelines using Kafka** for email notifications and iCal integrations, enabling asynchronous processing.
- Handled data persistence across **Oracle and MongoDB**, optimizing queries and improving scalability.
- Developed secure REST APIs using **OAuth2/JWT**, supporting 1000+ concurrent users.
- Refactored monolithic modules into microservices, reducing deployment time by **40%** using Docker and CI/CD pipelines.
- Implemented **resilience patterns** (retry, circuit breaker) and centralized logging to improve system reliability.
- Optimized backend performance using caching and async processing, reducing API latency by **20%**.

Infosys

Feb 2023 – Dec 2024

Specialist Programmer L1

Pune, MH

- Designed and developed scalable **Spring Boot microservices** handling authentication, ticketing, loyalty, and notification workflows across distributed systems.
- Implemented **event-driven architecture using Apache Kafka**, enabling asynchronous communication between 10+ services and improving system throughput.
- Executed Spring Integration framework for effective communication across micro-services architecture, utilizing transformers and filters. This resulted in a 25% improvement in inter-service communication efficiency and reduction in data processing time.
- Collaborated with cross-functional teams to design scalable APIs aligned with enterprise architecture standards.

Cognizant Technology Solutions

Aug 2021 – Nov 2022

Programmer Analyst

Pune, MH

- Worked in ITSM Suite (Service-Now). Experience in end-to-end Service Catalog, Incident Management, Change Management and Problem Management.
- Enhanced Java and JavaScript modules, aligning them with project requirements and maintaining high-quality standards, achieving a 20% improvement in reliability metrics.
- Ensured consistent project success through rigorous participation in code reviews, testing, and debugging processes, maintaining high-quality code standards and achieving a 15% reduction in bug density.

Projects

Pool Lens – AI Talent Allocation Engine | *FastAPI, React (Vite), ChromaDB, Azure OpenAI*

- Built an AI-driven talent allocation system to automate **bench resource mapping** based on skills, experience, and project requirements.
- Aggregated and processed candidate data from **multiple sources** including resume parsing, internal learning portals, certifications, and GitHub activity.
- Implemented **vector embeddings using ChromaDB** to enable semantic search and intelligent candidate matching.
- Integrated **Azure OpenAI (GPT)** for contextual ranking and recommendation of candidates for project allocation.
- Designed a **rule-based + AI hybrid system** to generate balanced candidate pools (0–2 yrs, 2–4 yrs, 4+ yrs) for hiring managers.
- Developed scalable backend APIs using **FastAPI** and interactive frontend using React (Vite) for real-time querying.
- Reduced manual effort in talent allocation by simulating **automated decision workflows** and improving selection efficiency.
- Implemented **semantic ranking and filtering logic** to prioritize candidates based on skill relevance and experience.
- Designed the system to support **scalable candidate search and real-time recommendations**.

Airline Booking Microservices Platform | *Java, Spring Boot, Kafka, Docker, REST APIs*

- Designed and developed **microservices-based backend** for airline workflows including user authentication, ticket booking, loyalty points, and notification services.
- Implemented **event-driven architecture using Kafka** for asynchronous communication between services such as booking, payment, and email notifications.
- Built secure and scalable **REST APIs** using Spring Boot with JWT-based authentication and role-based access control.
- Applied **data transformation and validation** using custom annotations, filters, and transformers for request/response handling.
- Designed centralized **exception handling and error management** to ensure system reliability and consistent API responses.
- Containerized services using **Docker** and ensured smooth deployment in a distributed environment.
- Improved system performance and maintainability by following **clean architecture and modular service design**.

Education

Lakshmi Narain College of Technology	Jul 2017 – Jun 2021
<i>Bachelor of Technology in Computer Science - 8.62</i>	<i>Bhopal, MP</i>
Udacity Nanodegree	May 2020 – Aug 2020
<i>Java Web Developer</i>	<i>Bhopal, MP</i>

Professional Certifications

- Microsoft Azure Developer Associate, 2026
- Infosys Certified Spring Microservices Developer, 2025
- Microsoft Fabric Data Engineer, 2025
- Google Cloud Digital Leader, 2024
- GitHub Foundation, 2024
